Θέμα

LLMs as a Soft Skill: Using Language Models Critically and Effectively

Περίληψη

Large language models (LLMs) are powerful tools that can support writing, coding, problem exploration, and communication. But like any tool, their value depends on how they're used. This seminar focuses on developing LLM literacy as a modern soft skill—emphasizing critical thinking, awareness of limitations, and responsible usage. We will show how to use LLMs to enhance our work without over-relying on them, and how to stay in control of both the process and the outcome.

Σύντομο βιογραφικό

Konstantinos Skianis is an Assistant Professor at the Department of Computer Science and Engineering of the University of Ioannina. Recently, he founded BLUAI, a Greek AI company which assists in accelerating AI adoption and incorporating novel NLP technologies. He also co-founded PrimeHost AI, a startup which aims to automate guest conversations with the power of AI.

Previously, he was a Ph.D. student at École Polytechnique, where he completed his thesis entitled "Novel Representations, Regularization & Distances for Text Classification", as a member of DaSciM (Data Science and Mining team), under the supervision of Professor Michalis Vazirgiannis.

His main interests focus on Natural Language Processing, Machine Learning and Data Science in general. He is also interested in Deep Learning for Natural Language Processing.
