

# **On the Logical Modeling of ETL Processes**

Panos Vassiliadis, Alkis Simitsis, Spiros Skiadopoulos

National Technical University of Athens

{pvassil, asimi, spiros}@dbnet.ece.ntua.gr

# What are Extract-Transform-Load (ETL) activities?

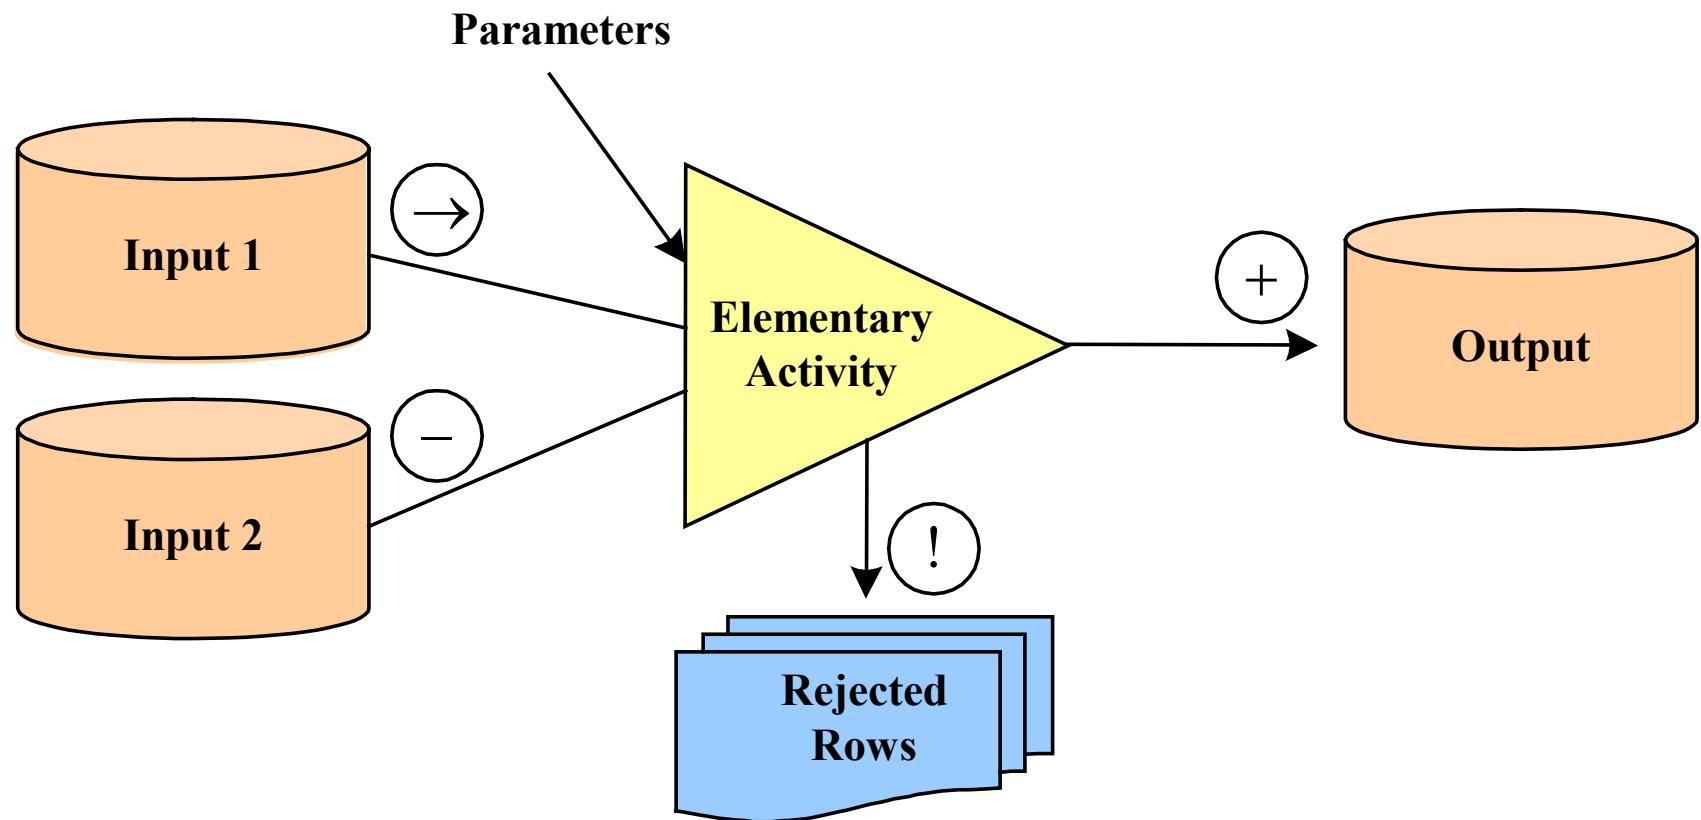

# Preliminaries

- **Data types** (name, domain) and **Constants**
- **Attributes**
- **Schemata** (finite lists of attributes)
- **RecordSets** (name, schema, extension) standing for tables and record files
- **Function types** (name, a finite list of parameter data types, and a single return data type). A **function** is an instance of a function type

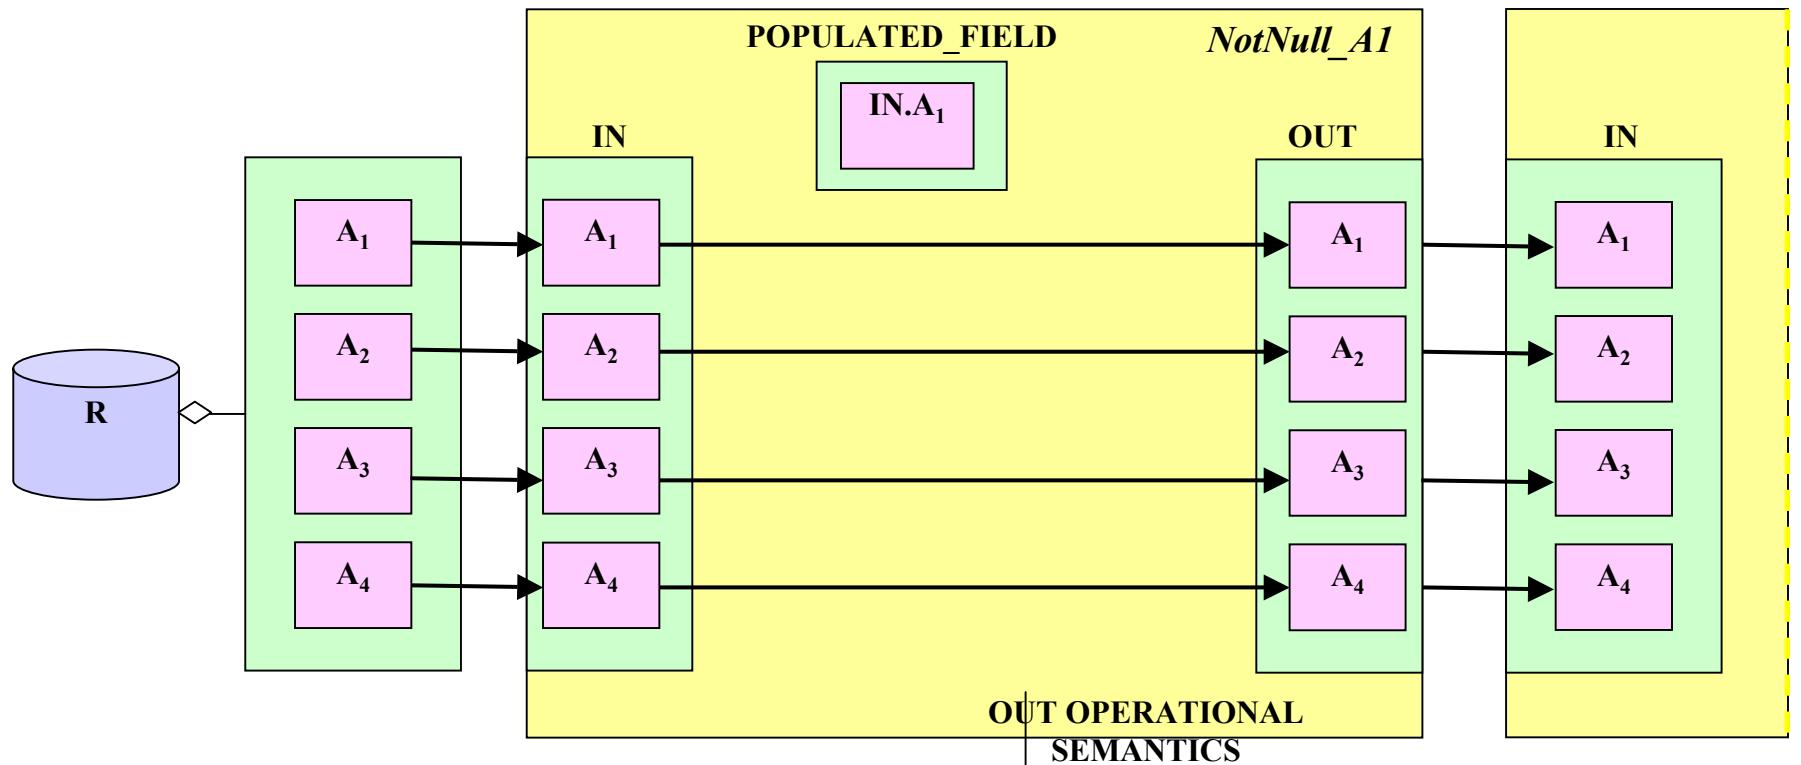

# Elementary Activities

- **Name**
- **Input Schemata**
- **Output Schema**
- **Rejections Schema**
- **Parameter List**
- **Output/Rejection Operational Semantics:** an SQL statement describing the content passed to the output of the operation, with respect to its input.
- **Data Provider/Consumer Semantics:** is the output appended to the target, or overwritten? Are the input rows simply read, or removed from the sources as well?

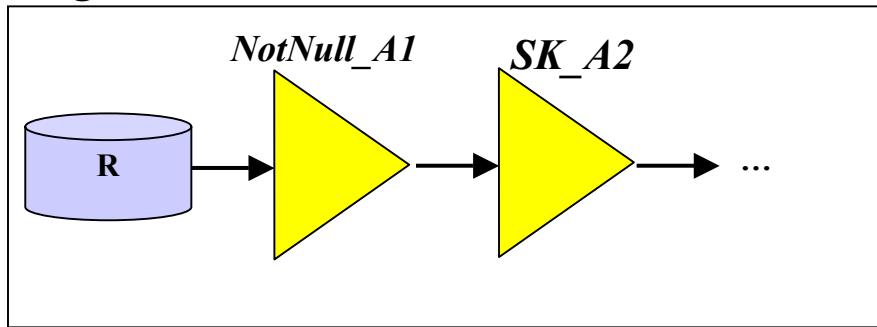

# Naïve Example of Elementary Activity

# Complex Example

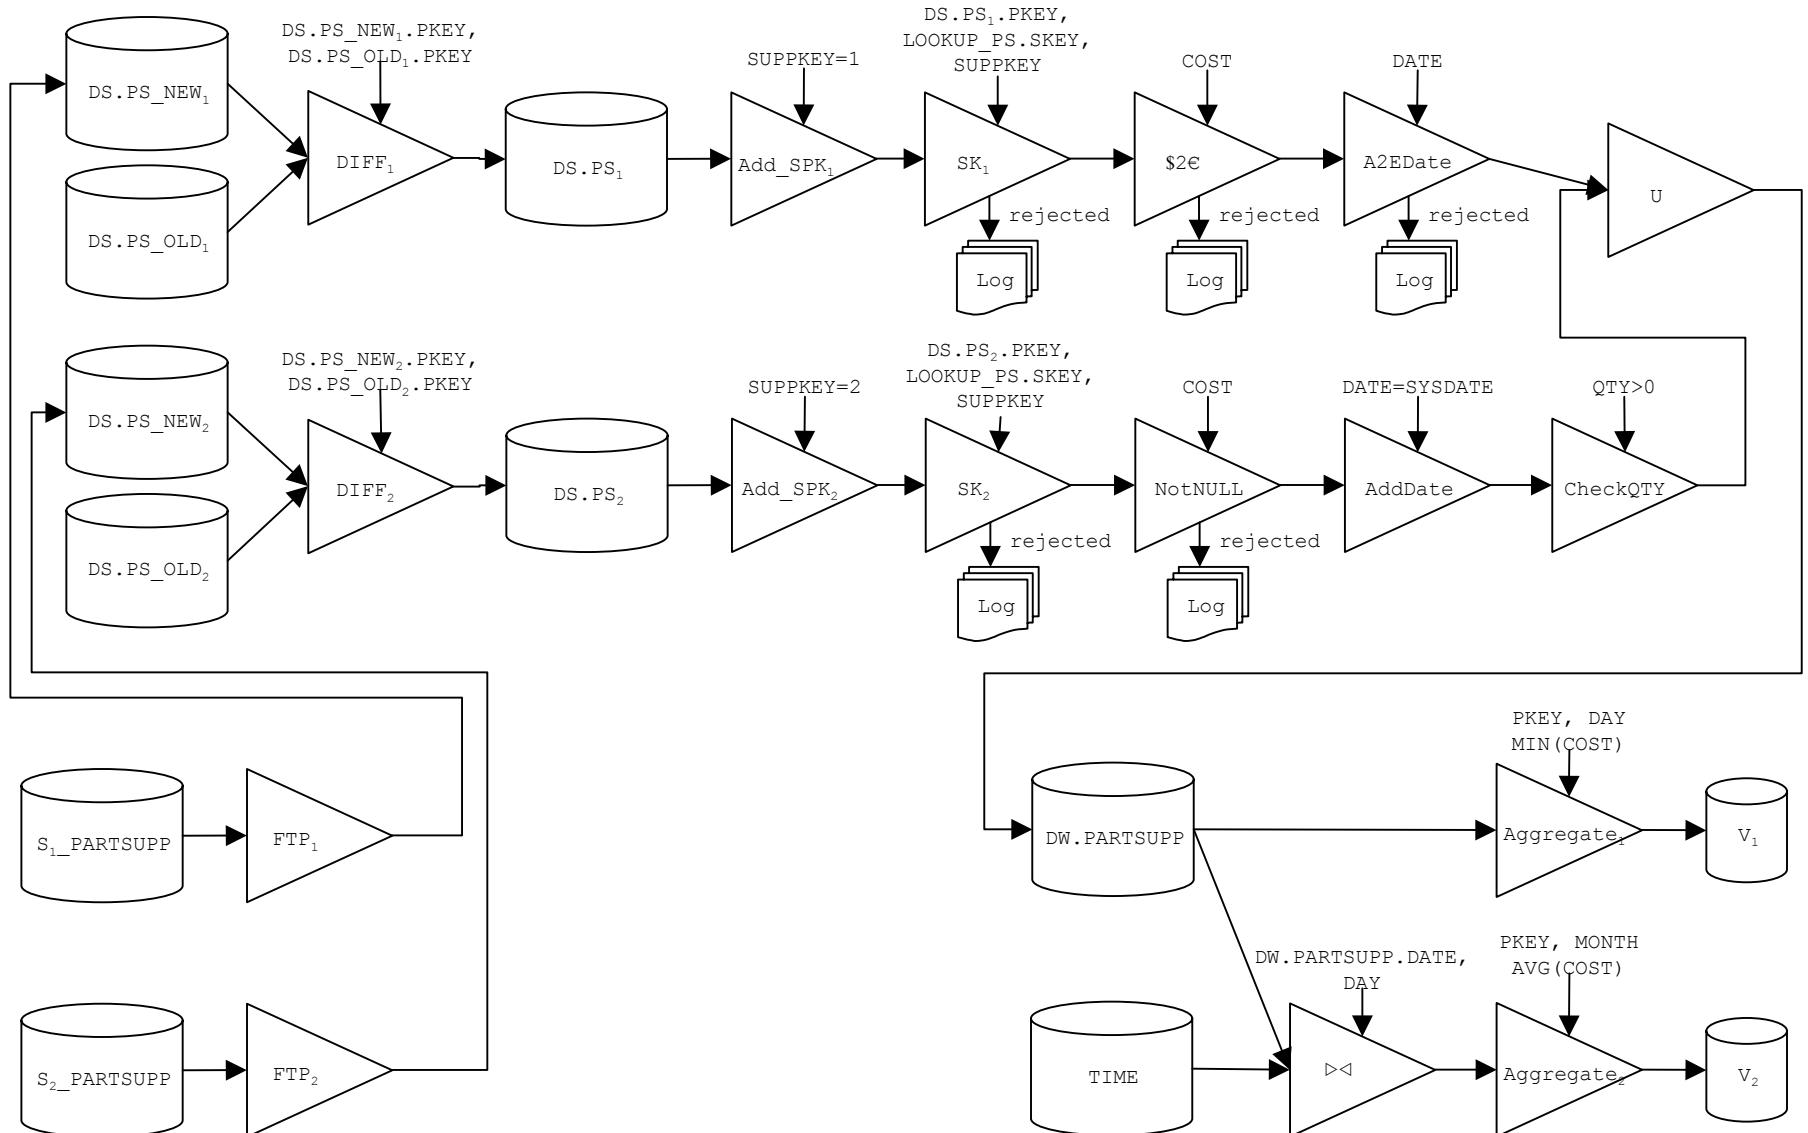

**Legend:**

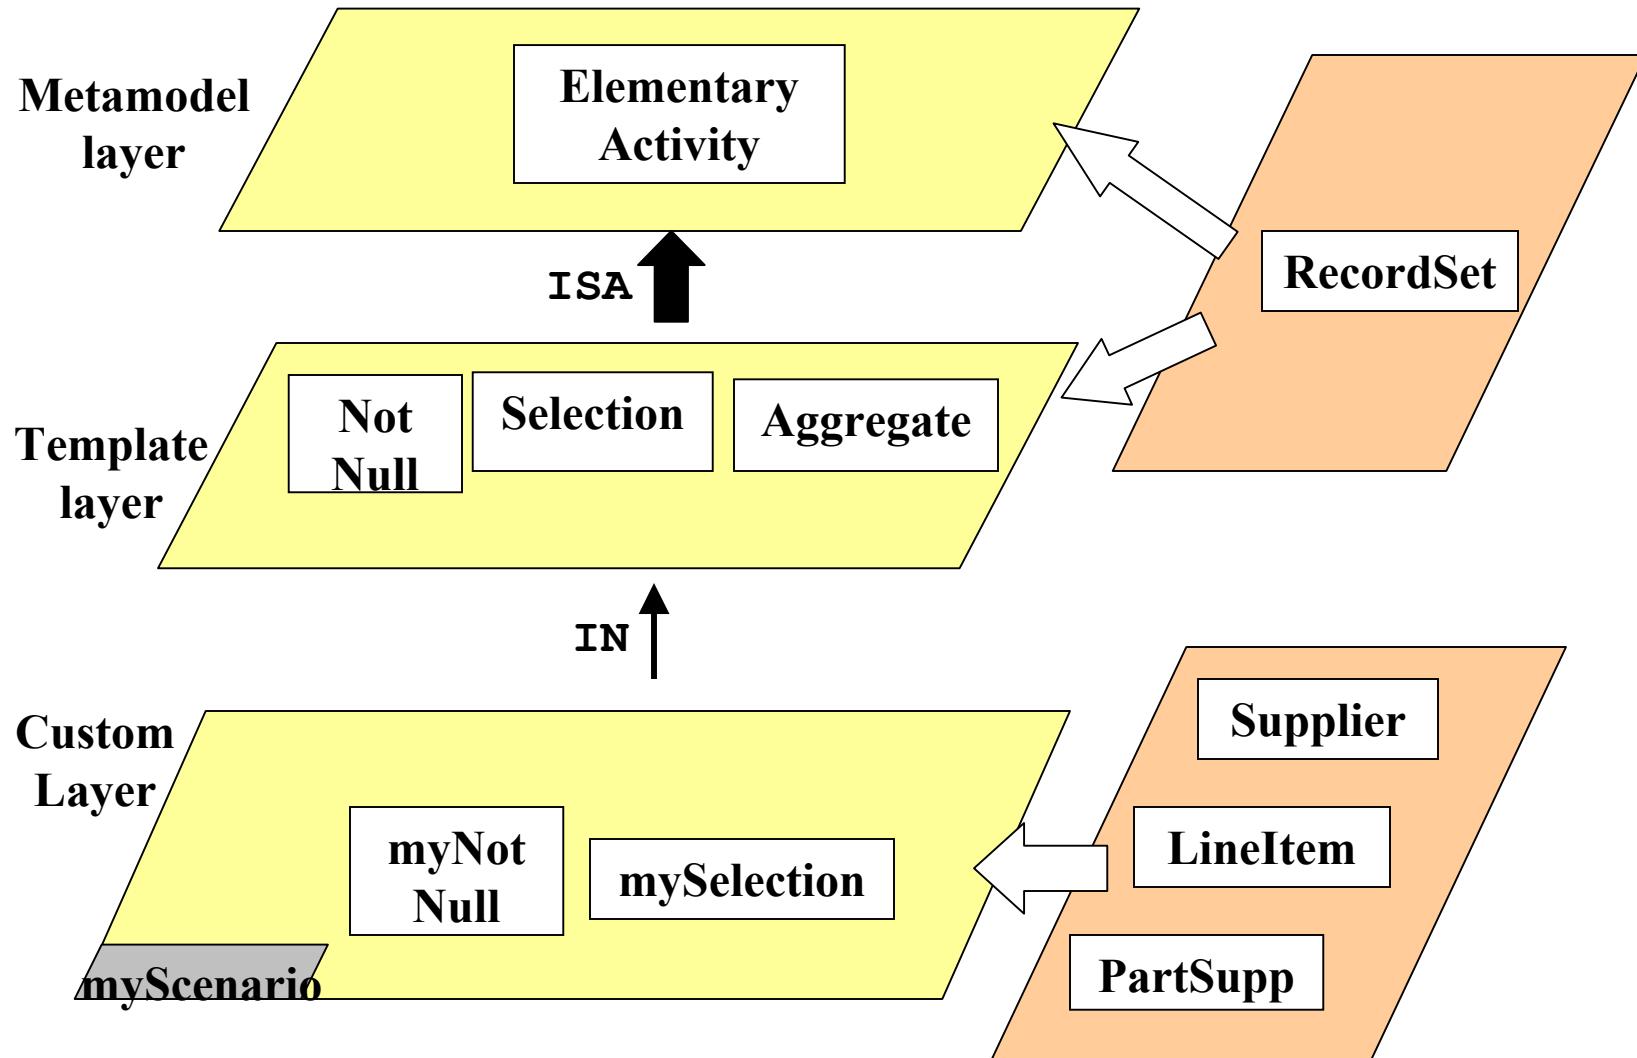

```

SELECT IN.A1 AS OUT.A1, IN.A2 AS
OUT.A2, IN.A3 AS OUT.A3, IN.A4
AS OUT.A4
FROM NOTNULL_A1.IN
WHERE IN.A1 NOT NULL
  
```

# A Typical ETL Scenario

# Template Activities

# Template Activities

## Filters

SELECTION ( $\varphi(A_{n+1}, \dots, A_{n+k})$ )

UNIQUE VALUE (R.A)

NOT NULL (R.A)

DOMAIN MISMATCH (R.A,  $x_{low}, x_{high}$ )

PRIMARY KEY VIOLATION (R.A<sub>1</sub>, ..., R.A<sub>K</sub>)

FOREIGN KEY VIOLATION ([R.A<sub>1</sub>, ..., R.A<sub>K</sub>], [S.A<sub>1</sub>, ..., S.A<sub>K</sub>])

## Unary Transformations

PUSH

AGGREGATION ([A<sub>1</sub>, ..., A<sub>k</sub>], [ $\gamma_1(A_1), \dots, \gamma_m(A_m)$ ])

PROJECTION ([A<sub>1</sub>, ..., A<sub>k</sub>])

FUNCTION APPLICATION ( $f_1(A_1), \dots, f_k(A_k)$ )

SURROGATE KEY ASSIGNMENT (R.PRODKEY, S.SKEY, x)

TUPLE NORMALIZATION (R.A<sub>n+1</sub>, ..., R.A<sub>n+k</sub>, A<sub>CODE</sub>, A<sub>VALUE</sub>, h)

TUPLE DENORMALIZATION (A<sub>CODE</sub>, A<sub>VALUE</sub>, R.A<sub>n+1</sub>, ..., R.A<sub>n+k</sub>, h')

## Binary Transformations

UNION (R, S)

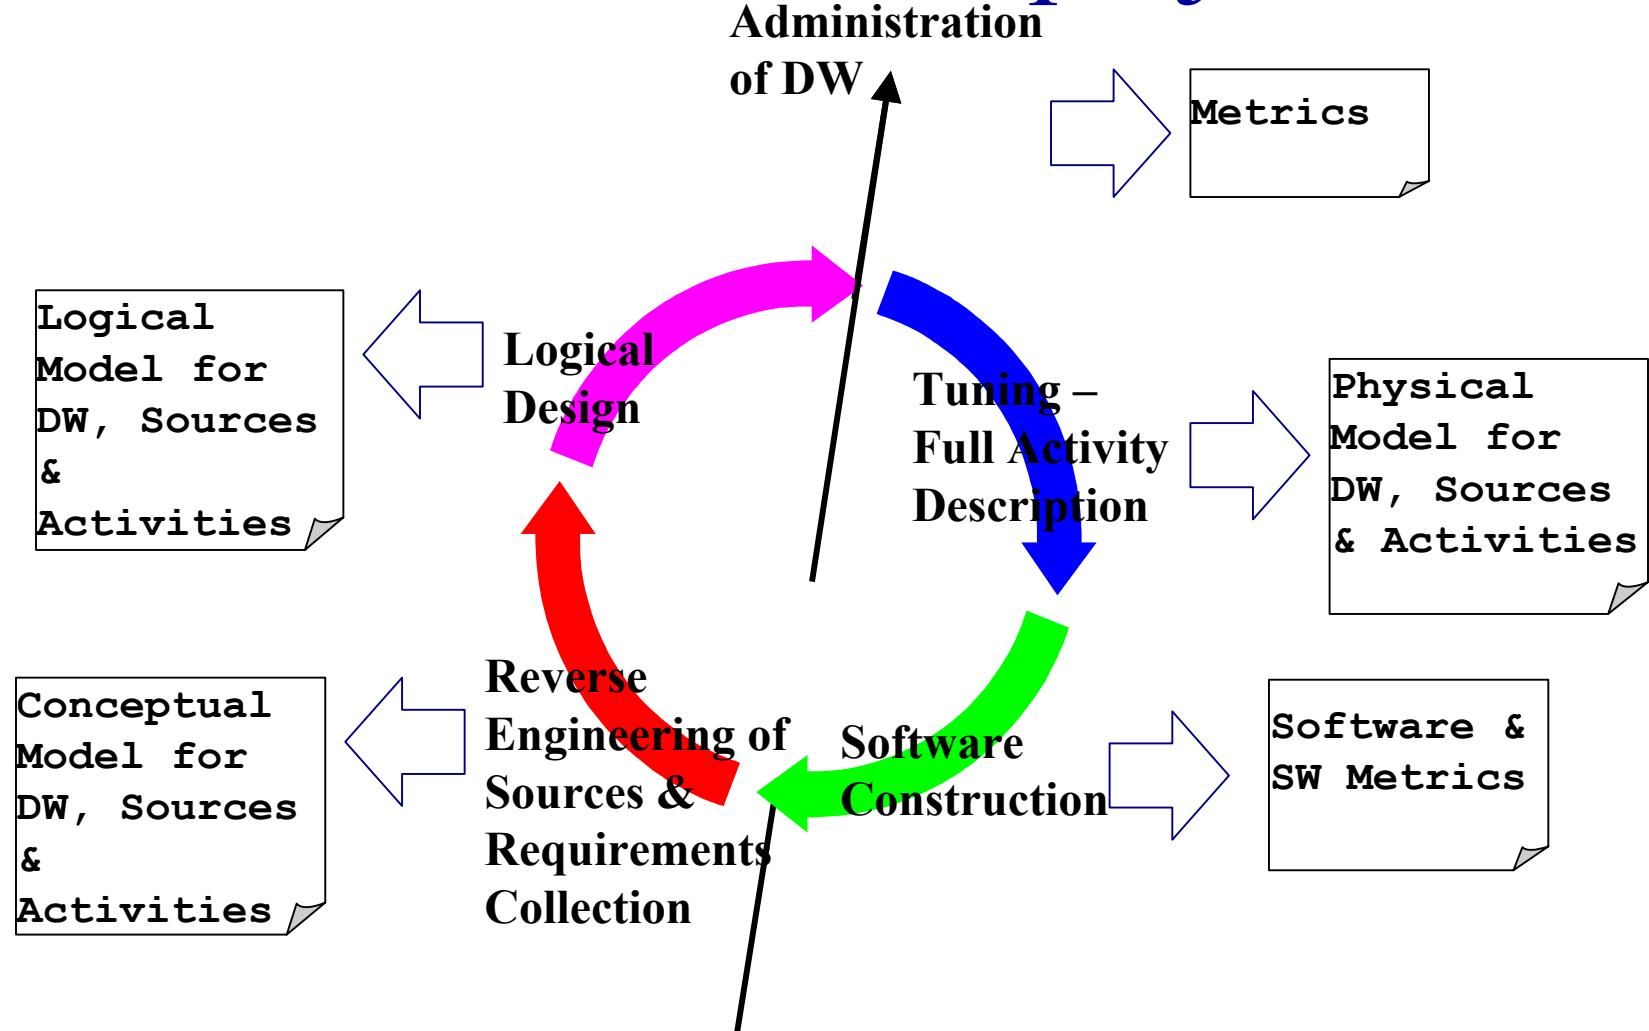

JOIN (R, S, [(A<sub>1</sub>, B<sub>1</sub>), ..., (A<sub>k</sub>, B<sub>k</sub>)])

DIFF (R, S, [(A<sub>1</sub>, B<sub>1</sub>), ..., (A<sub>k</sub>, B<sub>k</sub>)])

# Example of Template Activity

|   |   |
|---|---|
| Activity type   | DOMAIN MISMATCH (R.A, $x_{low}$ , $x_{high}$ )  |
| Input schema  | [A <sub>1</sub> ,...,A <sub>n</sub> ]   |
| Parameters  | [\$FIELD,R.A] [\$LOW, $x_{low}$ ]<br>[\$HIGH, $x_{high}$ ]  |
| Output schema   | [B <sub>1</sub> ,...,B <sub>n</sub> ]   |
| Rejection schema  | [C <sub>1</sub> ,...,C <sub>n</sub> ]   |
| Equivalent SQL statement for the output of the activity | SELECT A <sub>1</sub> AS B <sub>1</sub> ,..., A <sub>n</sub> AS B <sub>n</sub><br>FROM R<br>WHERE \$FIELD IN [\$LOW,\$HIGH] |

# The ARKTOS II project
